

Dear SCDO community,

It's our vision to make SCDO a fully decentralized project. SCDO has never conducted any public sale and thus has insufficient funding since day 1. That's the major reason why we have run behind schedule in the past few months.

We are glad to see the SCDO mainnet running steadily since its launch. Despite all the difficulties, the initial team will continue to support the SCDO network voluntarily. In the near future, we will release a GPU mining feature. More new features are coming. Meanwhile, our team is working to get SCDO listed on exchanges.

Developers are welcome to join to develop new functionalities and maintain the network. Most premined SCDO tokens will be used to reward developers and community members. We are working on plans to motivate the community to build SCDO together with us.

Best regards,
SCDO Team
